### DETAILED ACTION

The prior art rejections are withdrawn in view of the following new ground of rejection, necessitated by applicant's amendments:

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 53-60, 62-68, 70-96, 99-101, 107 and 108 are rejected under 35 U.S.C. 103(a) as being unpatentable over Raja in view of Brunner.

Raja teaches the following reaction:

The catalyst is a Group VIII metal disposed on a mesoporous silica support, see page 4641, left column, bottom. The claimed metal dispersions are deemed to be necessarily possessed by the disclosed catalyst given the amounts of metals used in the catalyst preparation.

The rejected claims also cover those embodiments wherein the support is a mixed oxide and mixed pore size, physical properties of the catalyst, and hydrogenation

of different benzenecarboxylic acid derivatives. Raja fails to explicitly teach these embodiments. However, it is for this proposition that the examiner joins Brunner. In this regard, Brunner teaches hydrogenation of benzene polycarboxylic acids, and specifically teaches mixed oxides of different pore structures, see description bridging columns 2 and 3.

With regard to the physical properties of the catalyst, Raja substantially teaches the claimed catalyst, and therefore, any physical characteristics are necessarily possessed by the disclosed catalysts.

With regard to the specific benzenecarboxylic acid derivatives, hydrogenation of the claimed derivatived would be within the purview of those of ordinary skill, based on the success of the disclosed catalysts in the hydrogenation reaction.

Therefore, the claimed mixed oxide and mixed pore size, physical properties of the catalyst, and hydrogenation of different benzenecarboxylic acid derivatives are prima facie obvious in view of the combination of Raja and Brunnersince these references teach or suggest these embodiments.

Applicant argues that Brunner fail to teach the instant mesoporus material. However, give the description in Brunner, including the example, mesoporous silica is prima facie obvious.

Upon further consideration and, notwithstanding applicant's remarks, Brunner teaches a single metal (i.e., Ru) catalyst.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
